A Comprehensive Framework for Design

Written by renowned design expert Bella Martin, Universal Methods of Design Expanded and Revised presents a comprehensive framework for design that encompasses the entire design process, from research and ideation to prototyping and implementation. This framework is based on four key principles:

- **Human-centered design:** Design should always start with the user in mind. Understanding the needs, wants, and motivations of your users is essential for creating products and services that are truly useful and desirable.

- **Iterative design:** Design is not a linear process. It's iterative, meaning that you need to test your ideas, get feedback, and make changes along the way. This approach allows you to refine your design and ensure that it meets the needs of your users.

- **Evidence-based design:** Design decisions should be based on data and research. This means conducting user research, testing your prototypes, and gathering feedback from experts. By basing your design on evidence, you can increase the likelihood that your product or service will be successful.

- **Collaboration:** Design is a team sport. It's important to involve stakeholders from all disciplines throughout the design process. This collaboration will help you create a product or service that is both innovative and feasible.
